PYTHON CODE

```
import random
print('Hazardous Water Level=',str(random.randint(0,100)))
print('Temperature=',str(random.randint(0,100)))
print('Humidity=',str(random.randint(0,100)))
print('Pressure=',str(random.randint(0,100)))
```

The screenshot displays a Python IDE with two windows. The left window shows the source code for a script named 'python code.py'. The code imports the 'random' module and prints four random values: 'Hazardous Gas Level', 'Temperature', 'Humidity', and 'Pressure'. The right window shows the output of the script, which has been restarted. The output displays the following values: 'Hazardous Gas Level= 46', 'Temperature= 31', 'Humidity= 74', and 'Pressure= 96'. The Windows taskbar at the bottom shows the system clock as 21:49 on 11-10-2022, and the weather as 25°C Partly cloudy.
